Help

LAB 3 - OVERALL OBJECTIVES

The objective of this lab is to understand the use of protocols in a communication systems.

There are three tasks in this Lab.

In task 1, you will encapsulate a given bit sequence into a frame.

In task 2, you will use the training sequence to characterize a communication channel. You will inspect the received output to estimate a threshold to use for bit detection.

In task 3, you will write a program to determine the threshold value and recover the bit sequence from the received waveform.
