6.1 QUIZ QUESTION 1 (1/1 point)

The relationships between bit time and the bit rate/bit error rate for a hypothetical communication channel are shown in the graph below.

If the maximum bit error rate we can tolerate is 0.05%, estimate the maximum bit rate in Kbps that we can use for transmission.

Please key in the numerical value of your answer in the box provided below.

Answer: 100

EXPLANATION

6.1 Quiz Question 1 | 6.1 Equalization | ELE...

<https://courses.edx.org/courses/HKUSTx/EL...>

The lowest bit time we can use and still obtain a BER less than or equal to 0.05% is 10 microseconds, corresponding to a bit rate of 100Kbps.

Help

6.1 QUIZ QUESTION 2 (1/1 point)

What is the function of an equalizer in the receiver?

Please select the correct answer.

- ☐ To synchronize the transmitter and the receiver.
- ☐ To estimate the threshold for detecting 0 or 1 bits.
- ☐ To model the effects of the channel.
- ☒ To compensate for the effects of the channel. ✓

EXPLANATION

The equalizer tries to "reverse" the effects of the channel, by estimating the channel input from the channel output. Although this requires a model of the channel, modelling is not the primary purpose of the equalizer.

EdX offers interactive online classes and MOOCs from the world's best universities. Online courses from MITx, HarvardX, BerkeleyX, UTx and many other universities. Topics include biology, business, chemistry, computer science, economics, finance, electronics, engineering, food and nutrition, history, humanities, law, literature, math, medicine, music, philosophy, physics, science, statistics and more. EdX is a non-profit online initiative created by founding partners Harvard and MIT.
